Data Source: Maine Integrated Youth Health Survey.

Based on students who reported having had at least one drink of alcohol at least 1 day during the past 30 days.

Middle school survey includes 7th and 8th grade students.

All percentages are weighted to be more representative of the population of Maine students and to adjust for non-response.

95% CI = 95% Confidence Interval.

NA = not available: the sample size for the 5th and 6th grade survey does not allow for analysis at the county level.

^ Results are not reported because weighted data are not available due to low response rates.

Based on reported use in the last 30 days.

All percentages are weighted to be more representative of the population of Maine students and to adjust for non-response.

95% CI = 95% Confidence Interval.

^ Results are not reported because weighted data are not available due to low response rates.

Data Source: Maine Integrated Youth Health Survey (2009-2011). Maine Youth Risk Behavior Survey (2001-2007), US Youth Risk Behavior Survey (US 2009).

*There are slight differences between methodologies between the Maine Integrated Youth Health Survey and the Maine Youth Risk Behavior Survey, and therefore the data from these difference sources may not be directly comparable.

Based on students who reported smoking cigarettes on at least 1 day during the past 30 days

Middle School Survey includes 7th and 8th grade students.

All percentages are weighted to be more representative of the population of Maine students and to adjust for non-response.

95% CI = 95% Confidence Interval.

NA = not available: Middle school survey does not include question on sexual orientation, US YRBS does not provide weighted numbers, and does not include middle school grades.

** All racial categories are non-Hispanic except for "Hispanic."
